

Barri-Float

Barri-Float is a therapeutic bariatric pressure reducing mattress system specially designed for the morbid obese patient to lower interface pressure & temperature, improve clinical outcomes and to enhance patient comfort.

Vaperm Cover - Loose billowy vaperm cover reduces pressure, friction, shear, heat & moisture. The cover is anti-static, anti-fungal, anti-microbial, flame retardant and stain resistant with low Moisture Vapor Transmission (MVTR) to reduce risk of fluid ingress. 270° zipper for easy parts replacement and 4 reinforced mattress positioning handles.

Head zone - for comfortable, supportive pillow area.

Fire Regulation Code "16 CFR 1633" & "16 CFR 1632" Compliant.

Torso zone - 3 layers with over 200 load bearing support cells for localized reduced tissue interface pressure over critical bony prominences. Over 250 air chambers modulate heat build up for reduced maceration.

Heel zone - 3 layer with thermo conforming, slow reactive, ViscoElastic foam top layer for ultimate heel protection, maximum comfort and durability.

Transfer zone - enclosed side bolsters provide enhanced support, stability and ease of patient egress.

Dimensions
(36" to 48" or 36" to 54") width
x 84" Length with a 7" depth.
(800 LBS CAPACITY)
